Wood Science and Technology

Journal for Wood and Pulp
of the International Academy of Wood Science (IAWS)

Editor: F. F. P. Kollmann, München

Editorial Board:

F. E. Dickinson, Richmond
E. Fukada, Tokyo
K. Kratzl, Wien
W. Liese, Hamburg
V. Nečesaný, Bratislava
T. E. Timell, Syracuse

Volume 6
1972

Springer-Verlag New York · Heidelberg · Berlin

The copyright for all languages and countries, including the right to reproduce by photographic or other means, is transferred to the publishers as soon as the manuscript is accepted and published by them.

The reproduction of registered names, trade marks, etc. in this journal, even if not specially indicated, does not warrant the assumption that such names, as defined by the laws affecting protection of trade marks, etc., may be regarded as unrestricted and therefore free for unrestricted use.

Information for Authors

Original papers describing research in the fields of wood science and technology, including pulping processes and pulp properties, will be considered for publication. Review papers in these areas will also be accepted. Articles must be written in English with consistent use of either American or British spelling. They must represent an original contribution and may not, after acceptance, be submitted for publication elsewhere.

Manuscripts: Manuscripts should be typed with double space and a wide margin. Major and minor headings should be centered on the page and have initial capitals where proper. The title heading should be followed by the author's name and professional affiliation. The complete address of each author is given at the end of the paper. The abstract should present the highlights of the paper in a concise form, suitable for direct use in the abstract literature. Acknowledgements should be made in a footnote to the title heading. Latin names to be printed in italic type should be underlined with a sinuous line.

Literature references: Either one of two reference systems can be used. In the first, each citation is complete, and the reference is by author and year of publication. References are listed alphabetically at the end of the paper according to the first author. Volume number of journals is printed in boldface Names of journals should be abbreviated according to Chemical Abstracts, Biological Abstracts, or Forestry Abstracts, with preference in this order.

Journal Articles:
Liese, W., Bauch, J. 1967. On the closure of bordered pits in conifers. Wood Sci. Techn. 1: 1—13.

Books:
Wardrop, A. B. 1964. Structure and formation of the cell wall in xylem. In: Zimmermann, M. H. (Ed.): The formation of wood in forest trees. New York: Academic Press, 87-134.

According to the second system references are also introduced by author and year, but the alphabetical reference list may be abbreviated as follows.

Journal Articles:
Liese, W., Bauch, J. 1967. Wood Sci. Technol. 1: 1.

Books:
Wardrop, A. B. 1964. In: Zimmermann, M. H. (Ed.): The formation of wood in forest trees. New York: Academic Press, 87.

Figures: Illustrations are to be restricted to absolutely necessary clarifications of the text. The same information must not be presented in both a table and a figure. Figures are numbered with arabic numerals. Line drawings should, if at all possible, conform to the style of the journal and be done in India ink. Original drawings or photographic copies on glossy paper should be submitted with the manuscript. Letters and numbers must be sufficiently large to be readily legible after reduction to printed size. Photographs and photomicrographs must be printed on high-gloss paper and be rich in contrast. Lettering and other markings can be made by the author, provided they conform to the style of the journal; otherwise this will be done by the editorial office. In the latter case they should be submitted on a cover sheet. The orientation of the illustrations should be indicated. Photomicrographs should have a mark indicating magnification, preferably in micrometer. Only one set of original illustrations has to be submitted. Figure legends should be complete and readily understandable without reference to the text and be typed on a separate page in consecutive order. After publication, original illustrations will be returned to the author.

Proofs and reprints: Galley proofs are sent to the author in duplicates. One copy should be carefully corrected, using internationally accepted symbols. Authors will receive 50 reprints free of charge. Additional reprints will be supplied at cost and should be ordered on the form supplied for this purpose with the galley proofs.

The editorial office requests observance of these guidelines. This facilitates cooperation between authors and editors and helps shorten the period of publication.
